RTCFR Assignment 2 - Healthy Meal Planner | learn. build. operate

1. Scenario

A working professional wants healthy South Indian meals to support weight loss. They are vegetarian, based in Tamil Nadu, and spend most of the day at an office desk. Your job is not to write the meal plan by hand - it is to write a well-structured **prompt** that makes an AI model produce the plan for you.

Framework: RTCFR (Role, Task, Context, Few Shots, Response Format)

2. Your task

Create a single **RTCFR prompt** that generates a **7-day meal plan** for this person. RTCFR is a way of structuring a prompt so the model has everything it needs: who it should act as, what to do, the background details, a few examples to copy the style from, and the exact shape of the answer.

3. Expected RTCFR elements

Your prompt must clearly include all five elements below:

Element	What your prompt must include
Role	Certified Nutritionist
Task	Create a meal plan
Context	Vegetarian, Tamil Nadu, office worker, weight-loss goal
Few Shots	Sample meal recommendations (a couple of examples)
Response Format	Day-wise table

4. Requirements

- Write one RTCFR-structured prompt - do not hand-write the meal plan yourself.
- Label or clearly express each of the five elements: Role, Task, Context, Few Shots, Response Format.
- The plan it produces must be South Indian, vegetarian, and aimed at healthy weight loss.
- It must cover all 7 days of the week.
- Use the Few Shots section to give one or two sample meal recommendations so the model copies the right style.
- Ask for the answer as a clean day-wise table.

Think it through

A good prompt removes guesswork for the model. Be specific in the Context (portion sizes, simple ingredients, office-friendly meals) and let the Few Shots set the tone. The clearer your Response Format, the more consistent the table you get back.

5. Expected output

When your prompt is run, the model should return a clear day-wise table, roughly in this shape:

Day	Breakfast	Lunch	Dinner
Day 1	...	...	...
Day 2	...	...	...
...	...	...	...

You may add columns such as a snack or approximate calories if it makes the plan clearer.

6. What to submit

- Write your RTCFR prompt and save it as a document file (.doc or .docx).
- Upload the document to **GitHub**.
- Share your GitHub repository link in **WhatsApp**.
- Post your screen-recorded video of the prompt generating the meal plan in the **Skool community**.

Reminder: the skill being graded is your prompt, not the meal plan. Write the RTCFR prompt yourself - the elements above are your guide, not the finished answer. Good luck!
